

Full source-branch catalog: the newly found BIP parent is shown separately

BIP: $T = 2.476936-2.982225$. PK_B2_Parent: $T \leq 2.440936$. B2: $T \leq 2.381887$. Supplied PK: $T \leq 1.564520$.

Curve crossings in these projections do not establish orbit identity. BIP has 904 stored points; its two ends stopped at a cutoff / solver failure.
Red stars identify the PIP-PK-B2 path. The new local standing-parent connection of BIP is shown in `bip_origin_check.png`.
