

Delayed-liftoff PIP → traveling pronking → B2

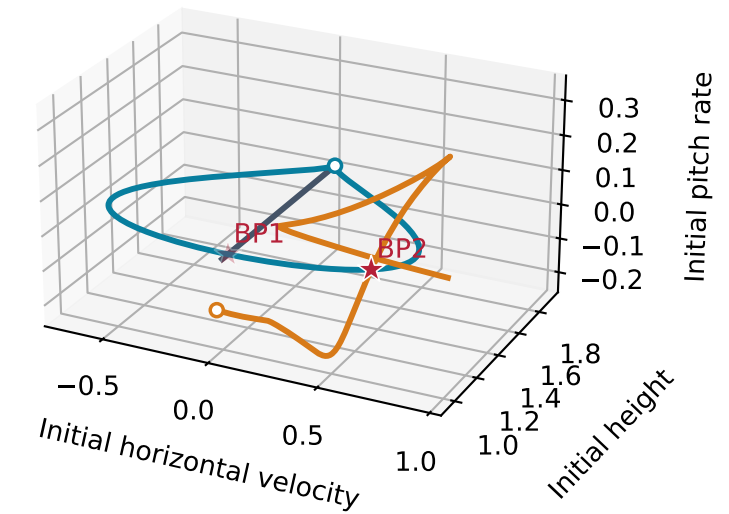

Full stored pronking branch (259 points) and full stored B2 branch (852 points), with the analytic vertical parent

— Delayed-liftoff PIP — PK_B2_Parent — B2 ★ Floquet-verified branch points

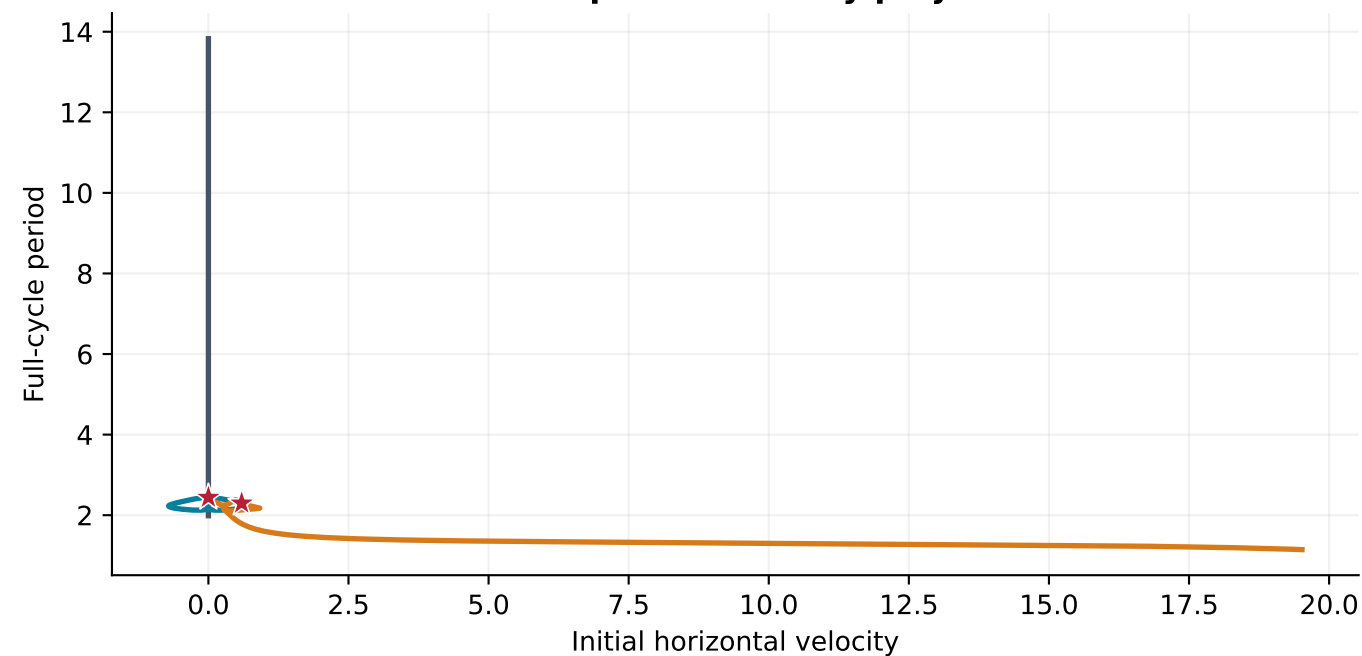

A Full stored branches and vertical parent

B Detail at the two verified branch points

C Entire period-velocity projection

BP1: $(u, y, T) = (0, 1.0456949463, 2.4409364464)$ • BP2: $(0.5934307505, 1.1562269187, 2.2978282484)$

The delayed parent allows tensile GRF. A regular connection from ordinary saved PIP remains unestablished.

Only red stars certify connections. Open circles mark stored endpoints; other projected crossings and the near-collapse limit are not verified connections.

D Connection detail in a second projection
